## TSC Description

Identify data sets for the application of statistical techniques to analyse and interpret large complex data to uncover trends or patterns in order to locate and define new process improvement opportunities.

### TSC Proficiency Description

### Knowledge

- **Business Statistics**
- **Microsoft Excel functionalities**
- **Operations of statistical techniques, e.g. Mean, Median, Regression Analysis**
- **Types of statistical software**
- **Strengths and limitations of each statistical technique in evaluating big and complex data sets**
- **Factors that determine applicability of statistical models for big data analytics**
- **Relevance of big data analytics in improving business outcomes**
- **Knowledge of how big data analytics transform business decision making**
- **Knowledge of how big data analytics works in tandem with other forms of business analytics solutions**

### Abilities

- **Identify areas with meaningful data for collection**
- **Carry out the collection of data in a format for easy manipulation**
- **Interprets data collected for categorisation into areas for process improvement**
- **Enhance the quality of data collected by scrubbing and removing duplicates**
- **Analyses data set using basic statistical techniques to identify trends and patterns**
- **Collaborates with stakeholders to identify more specific data for further analysis**
- **Reviews data sets uncover trends or patterns**
- **Develops new methods to conduct analysis of large complex data sets specific to each issue**
- **Facilitates the discussion on areas for application of big data analytics to examine issues**
- **Formulates the approach used for big data analytics to a more bespoke solution addressing the shortfall of the current system**
- **Devises different analytical tool sets to provide an array of integrated solutions to improve business processes through big data analytics**
- **Guides junior employees in the refinement of big data and statistical analytics specific to the business**
- **Inspires the usage of big data science as a tool for business process improvements**
- **Influences stakeholders on the importance of big data analytics to discover solutions to improve business processes**
- **Synergises the use of big data analytics with other forms of business analytics to improve business processes**
